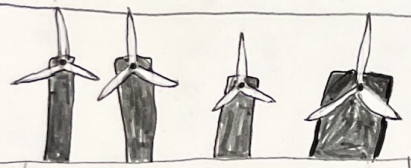
Saving Energy

what is the problem?

- when foss fuels are burned, they release large amounts of carbon dioxid, a greenhouse gas, into the air.
- in addition to releasing planet-warming greenhouse gas emissions, burning fossil fuels also generates localized air pollution
- Also that increase the risk of death from strokes, heart disease, lung and respiratory illness among those exposed.



what are the 3 important facts?

- A single lighthing bolt unleashes five times more heat than the sun.
- 60 minutes of Solar energy could power the Earth for a year.
- he amount of energy Americans use doubles every 20 years.

why is it important?

- Saving energy reduces air and water pollution and conserves natural resources, which in turn creates a healthier living environment for people everywhere. At the same time, efficiency also saves money and creates jobs.
