

**Testimony of David Sandman, Ph.D.  
President and CEO  
New York Health Foundation**

**Submitted to the New York State Joint Legislative Public Hearing  
2025 Executive Budget Proposal: Health  
February 11, 2025**

Thank you, Chair Kreuger, Chair Pretlow, and members of the Senate Finance and Assembly Ways and Means Committees, for the opportunity to testify. I am pleased to provide testimony on behalf of the New York Health Foundation (NYHealth), a private, independent, statewide foundation dedicated to improving the health of all New Yorkers, especially people of color and others who have been historically marginalized.

**As we work to transform New York's health care system—enhancing accessibility, quality, and equity while controlling costs—we must expand and strengthen primary care.** To achieve this, New York leaders need to:

- **Require health insurance companies to prioritize spending on primary care.**
- **Allow Medical Assistants to vaccinate patients, easing the burden on doctors and nurses.**

**Primary care is the cornerstone of better health, but is woefully underfunded**

Primary care is often a patient's first and most frequent point of contact with the health care system—and one of the strongest predictors of better health outcomes. Research proves beyond a doubt that accessible, high-quality primary care leads to:

- More preventive care, including cancer screenings, flu vaccinations, and nutrition counseling.<sup>1</sup>
- Better management of chronic diseases, such as diabetes and asthma, reducing complications and improving quality of life.<sup>2</sup>

However, one in three New Yorkers lives in a region with insufficient primary care access, and it's far worse for rural communities and communities of color.<sup>3</sup> In predominantly Black neighborhoods, residents are **28 times** more likely to live in census tracts with the most

pronounced primary care shortages.<sup>4,5</sup> Across the state, New Yorkers have to wait weeks or months to see a primary care doctor or nurse.

When people can't see their doctor when they need to, they end up sicker. They are then forced to turn to hospitals or emergency rooms (ERs), where it's much more expensive and more traumatic. The average cost of an ER visit is more than \$1,200 compared to \$300 what it costs for a primary care visit.<sup>6</sup> Primary care saves lives and dollars.

### **Investing in primary care is key to a stronger, more effective health care system**

Our health care system is out of balance. In the United States, less than 5 cents of every dollar we spend on health care goes to primary care doctors and nurses, even though they handle one in three health care visits.<sup>7,8</sup> In New York, primary care spending is even lower than the national average—and it has decreased over the past five years.<sup>9</sup>

At the same time, New York spends 20% more on health care than the national average—yet our health outcomes remain average or worse compared to other states.<sup>10,11</sup>

**It's not about spending more. We need to spend smarter and better, and in ways that give us better value for our dollars.**

**The solution is to require health insurance companies to prioritize spending on primary care. This means rebalancing health care spending by allocating a greater percentage of what we spend to primary care.**

**New York State should set a specific and ambitious target for increasing investment in primary care. At least 17 other states have already adopted policies to do so.<sup>12</sup>** Those that acted early—such as Rhode Island—have seen both a decrease in overall health care costs and an

increase in the primary care workforce. By requiring commercial insurers to increase the share of primary care expenditures by 5% over five years, Rhode Island lowered total health care expenditures by 14% while growing its primary care provider workforce.<sup>13</sup>

Most recently, California's Office of Health Care Affordability set an ambitious target for primary care investment. Research on California's commercial health care market revealed the transformative power of such a policy shift. It found that if organizations that spent the least on primary care matched those that spent the most on primary care, 25,000 acute hospital stays, and 89,000 emergency room visits would be avoided. And, \$2.4 billion in health care spending would be saved in a single year.<sup>14</sup>

New York cannot afford to fall behind. The Legislature has already recognized the urgency of this issue, passing bills to establish a primary care reform study commission, only to see them vetoed by the Governor, who acknowledged that New York underspends on primary care. This session, Senator Rivera and Assemblymember Paulin have introduced bills (S1634/A1915A), that would require health insurers that spend less than 12.5% of their overall spending on primary care to gradually increase their spending (1% per year) until they do so. Just last week, the bill passed through the Senate Health Committee.

### **A common-sense policy to unlock the full potential of medical assistants**

Investing in primary care is the fundamental—but not the only—way to enhance patients' access to primary care and strengthen providers' ability to provide quality care. Addressing workforce shortages and provider strain is also critical. One immediate, practical solution is to expand the role of Medical Assistants (MAs).

MAs are vital members of the primary care team, responsible for administrative tasks and certain clinical duties under the supervision of a physician or other clinician.<sup>15</sup> As one of the fastest-growing health care professions, the number of MAs in New York is expected to rise by 27% between 2022 and 2032, outpacing many other health occupations.<sup>16</sup> Care teams that use MAs beyond administrative and basic clinical duties often see improvements in patients' use of health services and health outcomes;<sup>17,18</sup> improved clinical quality metrics and operational

efficiencies;<sup>19,20</sup> and reductions in provider strain and burnout.<sup>21</sup> MAs are also predominantly people of color and often come from the communities they serve, making them uniquely positioned to build relationships with patients and earn their trust.<sup>22</sup> In short, MAs are capable of—but currently underutilized in—supporting equitable and high-quality patient care.

New York has lagged other states in making the most of MAs' potential. **We are the only state that does not allow clinicians to delegate the task of administering injections, like vaccinations, to Medical Assistants, with appropriate training and supervision.**<sup>23,24</sup> This gap was cast into relief during the COVID-19 pandemic, when New York's health system was strained by the massive task of immunizing New Yorkers. New York did *not* allow MAs to administer COVID vaccines, in contrast to neighboring states like New Jersey and Connecticut, along with many others.<sup>25,26,27</sup>

The Executive budget proposal includes a common-sense provision to bring New York in line with every other state by allowing trained MAs to administer vaccinations under the supervision of a physician or physician assistant. Permitting MAs to administer vaccinations will increase the number of health professionals available to vaccinate New Yorkers and free up clinicians to focus on more complex patient care needs.

NYHealth-supported research confirms this.<sup>28</sup> A survey of primary care practice administrators and nurse supervisors of MAs across New York State reveals that 2 out of 3 primary care providers would be likely to have their MAs perform vaccinations if permitted. Among Federally Qualified Health Centers, New York's safety net primary care providers, that proportion increases to 8 in 10 providers. And 85% of practice administrators said they would train their MAs to vaccinate in-house.

<sup>28</sup> Summary of preliminary analysis available upon request.

There is no silver bullet to solve New York's workforce shortage, but enhancing the role of MAs is an immediate, common-sense, and widely supported step. This will also enable other clinicians to work at the top of their licenses.

**Conclusion**

Primary care is the backbone of a high-functioning health care system. Greater investment in primary care as a percentage of total health spending will lead to a healthier New York and a more cost-effective system. Supporting and strengthening the primary care workforce will address widespread shortage and strain. Together, these efforts will advance racial health equity. By prioritizing primary care, we can build stronger, healthier communities across New York State and make sure everyone gets the care they need, when they need it.

We stand ready to work with you on these shared goals.
