

Air pollution is a very bad issue for the environment. It causes birth defects, diseases, contributes to global warming and rising temperatures for air and water. Even though air pollution is a problem, we can still work together to reduce air pollution.

People could get diseases, wheezing, breathing problems, irritation to eyes throat and nose, and dizziness due to breathing polluted air. We need to act as many people will get health problems. Just because of air pollution many people will suffer from that. I hope many people start caring for this environment. There are many things that are affecting this environment. We can also stop littering and stop doing the worst for this environment. We all need thing environment safe.

How does air pollution cause global warming and rising temperatures for water and air? Air pollution is a part of the sun and earth because energy from the sun reaches Earth's surfaces, and it radiates back into the atmosphere as heat. Sometimes Greenhouse gases prevent it from happening.

Some solutions to air pollution are to drive your car less, keep your car in good repair so the exhaust doesn't pollute the air, and do not burn your garbage. These things could try to stop air pollution. More things that we can do to stop air pollution are planting trees, caring for plants, turning off your engine, using less energy and many more things. This will help a bit, but we could almost stop it, the littlest things could make big things go perfectly. Air pollution is very much ruining the environment because many people could start getting health problems.

There are many solutions for air pollution also, for example reducing the number of trips of car you have, avoiding burning leaves, avoiding using too much energy, eliminating fireplaces and wood oven use. There are even more solutions we can do to stop this from getting worse. Driving your car less could help. Not burning your garbage could help. Not having too many BBQ's during the summer could help. Switching to electric or hand powered lawn equipment could also help. There are many ways to stop air pollution. I hope this will help decrease it.
