

My topic is about pollution and why it is unacceptable. The problem with pollution is this can terribly ruin our ecosystem. Another problem according to the World Health Organization, is that it increases the risk of respiratory infections, heart disease and lung cancer. Also, according to the World Health Organization, this makes people that are ill more effective to pollution. This is why pollution is a problem.

As a solution to stop littering, we should start recycling more and making holidays dedicated to stopping pollution. I think this could really help because this will make people stop polluting. Another reason this is good is because this not only stops us from polluting is to get the government involved. This is the only way to get people to stop. Also charging people for this is a clever idea.

To summarize, pollution is a dreadful thing and could be solved in many ways. And if we all do our part, we can make the world a better place. This is how I think that we can stop pollution.
