

Deforestation has been taking over the world for a while now and I need your help to put an end to it. It can kill so many trees there would be no oxygen no one would last no humans, animals, and other living creatures that could breathe air could not last for long.

You see more than 15 billion trees get cut down a year this is supported by Tree Nation, 8 billion Trees, and time mass, unfortunately this is horrible news. Another problem our ecosystems and plants are facing is we keep using palm oil which is the main agricultural export of Indonesia and Malaysia generating ten percent and five percent respectively of their exports. This leads to companies cutting down forests for profit.

There are some solutions you can help us with due to these amazing websites the world counts, positive news, and utopia.org. They suggest we start planting trees, stop cutting trees, go paperless, and finally support responsible companies who agree to stop cutting trees. With these suggestions you as the legislator could help us and we would surely help forests and animals who live in nature!

We can save the earth as a team, we must be a bit more mindful of these forests, they provide more than you think. They include medicines, food, paper, And shelter for animals and creatures. These forests do not deserve this. Cutting them will have powerful effects for them, humans, animals, our ecosystem, and other existing creatures. Forests provide a lot of things like food, shelter, paper, and medicines. We need to keep them alive and healthy to benefit all living things.
