

POLLUTION

Air pollution increases the fact that there are also lung cancer and heart diseases that most of the population has or can get because of the air pollution.

Air pollution is bad for the earth because of it the exposure to the elevated levels of air pollution can cause a variety of adverse health outcomes. It increases the risk of respiratory infections, heart diseases and lung cancer. Both short- and long-term exposure to air pollutants have been associated with health impacts. And to protect yourself from the air pollution that is everyone's responsibility to do, and people need to do more often and a whole lot more is that you should like not to get around the sunlight so much and to move away from the fossil fuels.

Another effect on air pollution is that it can affect the lung development and it is implicated in the development of emphysema asthma and other respiratory diseases or sickness that they do not want or did not want to get. And it could also cause cancer, skin diseases and acid rain, and it is harmful to our health and to other animals because of the environment. It is reducing visibility and blocking sunlight causing acid rain and harming forests wildlife.

A solution that you could get away from air pollution is that you could drive your car less if you drive it around too much or you could turn your engine off if you are not using it or if you forget which, you should not forget to turn it off. Another solution to the pollution is that do not burn your garbage, plant, and care for all trees in the environment and use less energy so that the air pollution does not spread and build up so that there is not too much in the earth because it does spare a lot.
