

- These are the topics that me and my friends discuss regarding our NYS election process
 - Some of these are first hand observations...others are questions that I cannot seem to ever get answered.
- NYS Election process has never been audited.
- NYS Elections have added technology over the years (computerized voting, networks, internet, wifi, electronic post processing of ballots, etc.). And, because of those additions, nearly every procedure of the election process has been modified along the way.
 - 15 active networks during the Hilton CSD Budget and Board elections at Hilton High School, 400 East Ave., Hilton, NY on 5/18/21.
 - Dominion machines, that were used in this election, have been proven to be easily hacked.
 - Cannot say that these machines were connected to internet/wifi but the means to hack them was prevalent in the school and school parking lot where the election was happening.
 - Added rules, polling places, procedures (electronic signatures that do not look at all like actual signatures, new staff, new training methods (now entirely online).
 - We have new laws piled onto the backs of old ones (or modifications of existing laws) and the only proof of the process and the procedure is the election itself.
 - Taxpayers and residents no longer have confidence in the election process.
 - 2020 harbored in (at least) 32 executive orders from 3/12/2020 to 7/24/2020.
 - Were these legal according to NYS constitution?
 - Doesn't our state legislature make laws regarding our elections?
 - What happens to these executive orders in the next election?
 - What happened to our election in 2020 as a result of these executive orders?
 - People received two mailed ballots that they did not request (either one) due to some error on the first mail in ballot.
 - Do we know that the correct ballot was used to cast the vote?
 - Could have both ballots been returned and cast two votes?
 - Could the wrong ballot been used to cast vote?
 - How many of these were sent the first time? Second?
 - Was the election done in a bipartisan fashion as in the past?

- People showed up to vote in person on November 3, 2020 to be told they already voted. How can this be if they did not return a mail in ballot?
 - How was the locked down nursing home residents vote taken?
 - My mother-in-law is a nursing home resident and by the diligence of her family was able to get her vote taken on a paper ballot. What happened to that paper? How did it get tallied? Did it get tallied? What is the process for those voters during the lock down?
- Suggest that all ballots be manually counted and tallied at the place where those ballots were cast.
- No ID's to vote
 - I needed to provide a driver's license just to attend a recent Greece school board meeting but we don't need an ID to vote? Why?
 - Currently, one of the only available methods for a person to be validated to vote is by matching signatures from previous elections.
 - Electronic signatures were taken on iPad like devices. Those signatures will NOT look like an actual signature of a person.
 - If the electronic signature of the 2020 election replaces those signatures on file then the only current method of validating a voter is compromised.
 - I was an election inspector several years ago so I consider my training to have provided me with unique insight to our processes (or lack thereof).
- Suggest forensic audit modeled after that being done in Maricopa County, Arizona.
 - Audit all processes, procedures and results for NYS elections in all counties in NYS against the 2020 election results.
 - Review all machine settings, software and hardware to see what was happening during our elections.
 - Could NYS be involved in the cyber-attack as is being seen in other parts of our country?
 - Were algorithms imposed on our voting machines?
 - Many people that I know used a "Sharpie-like" marker versus a ball point pen. Did/does this affect the adjudication of their ballot?
 - Who fixes that ballot?
 - Remove all electronic voting devices, all electronic post processing and replace with paper ballots.
 - Do our voter registration records get updated?

- When was that done last?
- Could we have been subject to foreign interference by electronic and/or human wrong doing and intrusion into our election process?
 - Send our state legislatures and election experts to the Mike Lindell Cyber Symposium on August 10, 11 and 12th.
- Volunteers available to perform audits
 - Scrap income from getting rid of Dominion machines statewide could help offset costs of audits.
 - No networks, software/hardware maintenance needed.
 - Just provide a pen and paper ballot after checking ID against voter registration.
 - Train senior groups as a resource for performing audits.
 - Many people that feel strongly that wrong doing was done in our country and state elections and would be willing to volunteer for audit duty.
 - Resist federal attempts to nationalize our state sovereign election processes.
 - NYS has the means to do our own elections. We just need to ensure our processes are valid and that each valid New York State voter has their vote counted and counted only once.
