

Save the Environment

By Ailene D.

This is an Art project about the earth.

Some ways you can help the environment is you can put trash in a trash can or if it is reusable put it in the recycling bin.

Another way you can help is turning off the lights in a room when you're not in it.

Some facts about the environment are:

- Each year, on average, 1,500 pounds of waste per person goes into a landfill.
- Also the average person generates over 4 pounds of trash every day and about 1.5 tons of solid waste per year.
- The last fact is out of every \$10 spent buying things, \$1 (10%) goes for packaging that is thrown away. Packaging represents about 65% of household trash.
