

During this year, (2020-2021) our earth has been changing. A lot due to covid-19, too many plastic water bottles, and lots of endangered species. Earth Day is coming up soon. We all can have a fresh start then. We can reuse plastic water bottles, start using bikes, or start running/walking instead of using cars to let no more pollution in the air. We can stop cutting trees down so we don't lose more animals that live in trees, like squirrels. If we continue to keep cutting down trees, use cars to drive to a 5 minute destination and throw out reusable sources, our earth will not heal. Always remember to recycle too. If we continue to use bikes to arrive at short destinations, stop cutting down trees, and reuse, our earth will heal. I really do hope you consider doing all of these good deeds!
