

Name: Braden Brown

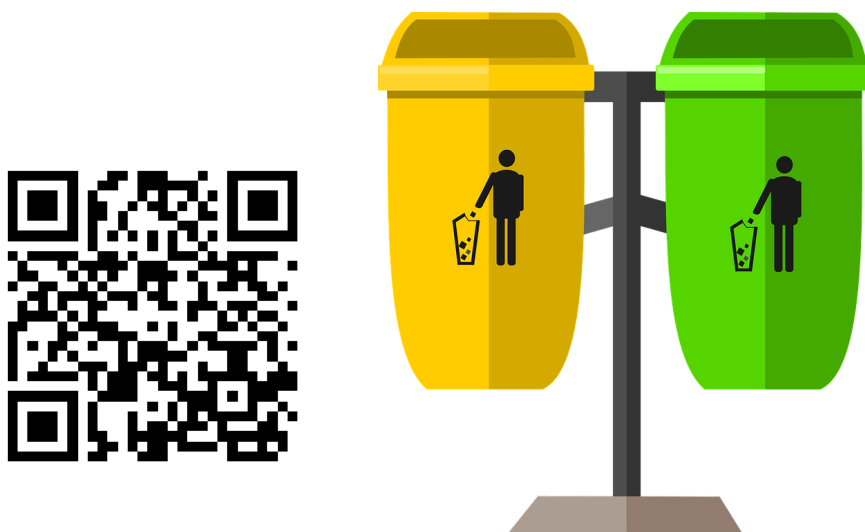

---

Hi, I'm Braden and I'm from Hermon Dekalb Central School and I think recycling is important because it helps the world. Recycling is important because it helps the ocean by taking garbage out and saving fish and animals lives.

I have an idea, all trash that needs to be recycled in cars and trucks that there is a garbage can in the car. There is a lot of trash that gets out of cars when a door is open. Another idea is a job to make sure all the trash goes in the right place, for example a person watches to make sure the trash goes in the right bin. Here is a 3rd idea: there is a single garbage can that one side is rycicible and the other side is normal garbage like in the photo below.

More ways to help recycle is to put up signs that say please help earth by recycling. Another idea is make a law where you have to pick up at least 3 to five pieces of trash a day. I did some research, there are 7.9 billion people in the world and  $7.9 \times 3$  is twenty-three billion seven hundred million a day. If this law happened, that's how much garbage would be picked up everyday. I used this research by google. That was my essay about recycling and reusing and reducing.

In conclusion I think these ideas will help the world grow and save animals. Some of my ideas are that you have to pick up at least 3 pieces of garbage a day and there is a car with a built in garbage can.
