

# Earth Day!

Earth Day is an annual event on April 22 to show support for environmental protection. Earth day is a very important day to help the earth. Recycling is a very big way to help the earth on Earth day. Recycling is the process when they convert waste materials to new products. Reusing is when you use an item and use it again for another purpose. Today I will be talking about recycling and the effects of not recycling. I hope you enjoy my essay.

Recycling is a very important thing to do so that we can make earth a better and less polluted place. As i said in my introduction, recycling is the process when they convert waste materials to new products. This can help the environment and earth because instead of throwing garbage and making a big and bigger dump of trash, you are recycling the item. Eventually if people keep doing this routine many changes can happen. If more and more people start recycling often I believe it could make a huge impact on the world. This is why recycling is extremely important.

Now that I've talked about recycling, I will talk about the harmful effects of **not** recycling. There are many reasons why it's harmful to **not** recycle. One reason why it is bad is because landfills are filling up faster. This is a problem because if this keeps happening there will not be enough space for garbage which could result in putting garbage in other places that aren't landfills. Another effect is that if we don't recycle we need more natural resources. In result, people will chop down and take away animals' homes leaving them unprotected. Lastly, the machines that people use to obtain natural resources is putting out a lot of pollution into the air, harming people and animals.

As you can see, recycling is extremely important. Earth day is a very special and important day for the earth. Yes! You can help the earth. On earth day or any day you can plant trees, reduce water, and you can pick up trash from the floor etc. Doing these things, you can help the environment and earth a wonderful safe place. I hope you enjoyed reading! I also hope that this essay encouraged you to do something about the environment.
