

Name: Dennis Lapoint III

---

My name is Dennis Lapoint III and I'm from Hermon Dekalb school. What would you do if your pencil breaks? Don't throw it out, put tape on it. If your eraser is missing on a pencil take a big eraser and use that. We throw out a lot of pencils and it hurts our environment. It hurts the environment by using the environment to make them.

Instead of an electric pencil sharpener maybe a pencil sharpener with a small solar panel on it would be better for our future. This will help us to save power at school. You can reuse parts out of a junkyard and you can use old bottles for the place that holds the pencil lead and it can charge the device by the sun from the window. You should buy it because the schools use a lot of power and energy and with the computers we use today all the time.

Instead you should use old tools instead of battery packs. Because it takes a lot of energy to charge and big factories.

Next time you are out at the store I think you should buy a big boat to go in all the bodies of water to take out all the metal and plastic with a big magnet and a big net. Because metal kills fish by them eating stuff off it.
