

The first earth day was in 1970.

Earth is the most dense planet in our solar system.

Earth day was made up by Senator Gaylord Nelson In 1960.

My creation is going to be a solar powered car!

It will help the earth by not using oil in cars and electricity it will simply use the sun. In one charge it will be able to go 500 miles! It helps save time instead of having to go to the gas station. It could also store power for a cloudy day.
