

Name: Dylan Amaral

Hello I am Dylan from the 5th grade class of Hermon Dekalb. So I was wondering : If dumpsters have cameras that detect items that should be recycled Why don't we make dumpsters that separate the two types of items? Maybe they cost too much money? Or are they harder to create and produce? I just hope someday we can find a way we can convince everybody to recycle.

To me people not reducing, reusing, and recycling seems to be the problem we face in the challenge. And then figuring out how to recycle all those things. I'm thinking maybe we could write something like [recycle me](#) to make little kids want to recycle. If you lick up all these people that work hard to clean the ocean they are really nice but only leaving a small dent in all the trash. It will take a lot more people to clean most of the world. And there are a lot of nice people in the world as long as we all work hard together we can slowly make the world a better place.

What if my robot ran on solar power? It is good for the environment and does not run during the night. They can be made from recyclables. Sell them for a kind of low price so people will buy them more. People already have sweeping and mopping robots. People also make sensors that detect trash so why can't we make a trash picking robot?

That is what I think we can do to pick up trash and recycle more. Thank you for listening to my idea to save the environment.
