

EARTH DAY

BY:Harper H. Schneider

Have you ever thought the planet is dying? Your parents say it's a beautiful world, I hate to break it to you but it's not. So let's hear how it's dying 1.pollution 2.killing animals 3.how to help.

Pollution has been affecting Earth. China for example, is one of the biggest factory counties in the world, you can smell toxic gas in big cities. College kids usually don't pick-up after parties which leads to pollution. Highways are another trashy place people throws stuff out their windows. Next up is wild life.

So, who is killing these animals? Not other animals but humans. Some people just don't get that a cigarette butt could kill a bird. Whales mistake trash for food which leads to death.Turtles get their heads stuck in can holders and bags. Sea life is really feeling the impact.

This all seems so terrible but here's how to help. Use water bottles instead of paper and plastic cups. Composting can help, you pour in scraps and you get soil. The saying reduce, reuse, and recycle is another way to make sure to help Earth. Let's talk about recycling, if you recycle bottles and other stuff it can turn into maybe a purse.

So, there are pros and cons. By maybe planting a tree you could save the world.You can be a super hero. Make sure to do your part. Have an amazing EARTH DAY!
