

Earth Day

BY Cameron Evans

Earth Day is something that most people like but some people hate. But I love Earth Day and this year I'm making paper from recycled paper and it's messy but fun and I would recommend making it. But anyway Earth day was created 1970 its been going on for 51 years wow that's a long time. I've only been alive for 10 Earth Days but it still counts. Anyway earth was created by a man by the name of Senator Gaylord Nelson and he was a great man.

Now on to my second part: how can we save the earth? We can save the earth by recycling and starting a compost, or riding a bike instead of using a car. Or if you have enough money buy a tesla. There are so many things you can do to save the earth. Like planting trees, or plants or vegetables or using old wood to build stuff or reuse and make new paper.

Now to the final part of the essay conclusion and why we should save the earth. The earth will and can die if we don't take good care of it and that's why Earth Day is a thing. But sometimes people forget that and that's why we need to take better care of the earth and the people on it and that is ultimately why Earth Day is a thing.
