

# ***How to Protect the Environment and What Happens if we Don't.....***

***By Daniel Ruenes***

**I think it is important to protect wildlife and their habitats/environment because it wouldn't be fair to animals and the environment because animals would go extinct and some might suffer because they have no habitat or any food to eat.**

**According to the [Animal Matters.org](http://AnimalMatters.org) website, 30,000 species die a YEAR because of loss of habitat!!! Think about it, do you want all those animals to die a year?? Some animals have already gone extinct because of loss of habitat, like the Tasmanian Tiger. You wouldn't want to never be able to see the cute face of a panda again, right?**

## **How to protect wildlife and the environment**

**One big way to protect wildlife and the environment is to stop cutting down TREES!!! Without trees there would be no habitat for animals like the brushtail possum or the sloth. This greatly damages the environment. Some animals don't even live in trees but are still affected when a tree is cut down. Animals have already almost gone extinct. For example, the indian elephant is almost extinct.**

**If you still think that you should make factories in the home of animals, then you should realize that factories damage the environment and the ozone layer. If the ozone layer is extremely damaged, the temperatures will get hotter and this is what causes global warming.**

**Another big way that can help wildlife and the Earth is by recycling. If you recycle or use reusable water bottles, you will greatly help the environment. Recycling helps by reducing the land and water pollution in the environment and helps animals like turtles and ocean animals.**

## **What happens if we don't protect the wildlife or the environment**

**If we don't protect the wildlife and their habitats, all animals could become extinct!!!! If all the animals go extinct, then the food chain would fall apart. This could negatively affect the world, environment and HUMANS!!!**

***EVEN LITTLE THINGS TO PROTECT THE ENVIRONMENT WILL HELP!!!!!!***
