

In this essay, I will explain how we can give our home, the Earth, and our environment a better future by reusing, reducing, and recycling.

We can reuse things instead of buying them over and over again. For example, instead of buying plastic straws, we can buy reusable straws that we can use, wash, and use again. Another example of how we can reuse items is by using both sides of a piece of paper. Instead of using only **one** side of a paper and using another piece, we can use **both** sides of the paper to reduce the amount of paper used. This is important because paper is made out of trees, and the more paper we use, the more trees are cut down. You see, trees give humans and animals clean air to inhale, food resources, and shelter for animals. This is why we should reuse items to make a difference.

We should reduce the amount of certain materials that we use, which can be harmful to the Earth. An example is by using glass plates instead of using plastic plates. This is because after we throw out the plastic plates, the plastic can go into landfills which then, in turn, can be dumped into natural environments. Using glass plates can reduce the plastic in the landfills. A second way you can reduce is by taking your own bottles instead of using plastic bottles. This can reduce the amount of plastic in our environment. These two reasons are some of the many reasons why we should take the opportunity to reduce as much as we can.

Finally, we should recycle objects. For example, we can recycle aluminum cans and aluminum foil. Recycling aluminum can produce a higher quality in life, create a healthier planet, and help sustain the resources we already have. Another example of how we can recycle used objects is by

recycling cardboard. Recycling cardboards can reduce pollution and conserve energy. This is why we should recycle items.

As you can see, **reusing, reducing, and recycling** objects can help make a better future for the environment, the earth, and for us too! :)
