Lets Save The Planet!!!!!!

Ways we are using energy

- ☐ leaving lights on
- ☐ keeping you Electronics on a charger
- ☐ keeping water going in the sink.
- ☐ Taking baths that wastes 25 gallons of water.
- ☐ using heaters.
- ☐
- ☐
- ☐

How does recycling save energy?

It helps by not making new products and saving and reusing the old. did you know that using reusable water bottles can save energy. Also 152 million phones get thrown away every year all of these charging cords connected could go around the earth 312 and wow does that waste energy. we could reuse all those phones instead of buy new ones.

Why Save Energy

Saving energy means saving the planet. From the amount of energy we use is crazy. The gas that you put in cars is made out of fossil fuels and is nonrenewable witch means it will take years to make it, All of this energy use is part of climate change.
