Name: Jasmine Simmons

We should have an app on our phones to remind us that we should always reduce, reuse, & recycle. The app will alert up to recycle or to reduce and reuse wherever it sees fit. You can reuse things to make posters about the app. We could also reduce carbon emissions if we don't use our cars as much and walk to work or school.

Wouldn't it be cool to make a robot that is powered by trash. So it can eat all of the trash up. You could have a store that reuses trash and makes unique fun things. I'd love to see plastic bottles converted to flower vases. My app would be thinking about these possibilities all of the time. Let me ask my app; could I reduce, reuse, or recycle these old headphones? When you buy a new phone youtube or google instantly on your phone my new app would be standard on phones. .

Maybe someday my app could help in the decomposition process and help with the germination of the soil and plant flowers. If people don't have the app it can be downloaded for a minimal cost with a part of the cost going back to helping save the environment. Everyone will know about it. Get the app!

Also this app can now predict if you bought a plastic straw it could tell you or remind you to not get plastic straws. The app will also be completely customizable so you can build and change your daily habits. It will also remind you if you want to reduce, reuse and recycle EVERYTHING & ANYTHING!

Thank you for listening. I am Jasmine Simmnons. I am in 5th grade and I go to Hermon-Dekalb central school.
