

Earth Day

By Lillian W.

3 Facts About The Earth

- Earth Day always falls on April 22.
- The first Earth Day was 1970.
- 20 million people participated in the first Earth Day in 1970.

Lillian Earth Day!
This Earth Day I want to make the world have no trash littered on the ground. One thing you can do is reduce, reuse and recycle. Reduce is good too. You could make a smaller amount of something. You could reuse some thing when like you done with a soda can or something you can make something out of it. You could also recycle. When you are done cleaning or eating something dont litter! Recycle it away! On Earth Day everyone should go around town and pick up garbage that people have thrown on the ground and pick it up! You should never litter because animals could get stuck in bottle and stuff and the animals could die. Thats a few ways how to save the earth.
