

CLEAN-O BOT

By Mia M.

- If you litter it can harm animals. Don't litter. It's bad for the earth!
- Trash is not good for the earth, it can kill and harm animals and sometimes be dangerous.
- If everyone in the world would help pick up trash the world would be less dirty and clean. It also would make a change in life.

This robot is called Clean-O-Bot and he helps clean up trash fast. His arms and legs can also extend so he can be taller to see better and to extend his arm to get trash far away. He puts trash in the door on his stomach and then he takes it out and puts it in the trash to clean up!

If you talk to people about littering you can convince them to stop, but some people don't. That is why I made Clean-O-Bot. He will help a lot!
