

An essay about ways to protect the Earth.

In this essay I will be teaching you ways to protect the Earth. One way we can protect the Earth is by not littering. In addition, we can protect the Earth by planting trees. Lastly, we can protect the Earth by recycling.

One way we can protect the Earth is by not littering. This is because when we litter it hurts sea animals and animals such as fish and sea horses. The animals can accidentally eat garbage, that they will choke on and may die. This hurts wildlife and the ocean. This shows that the if fish die we will have less fish and they will be extinct. When all fish die its not good because fish are part of nature and the Earth. Additionally, when we litter we we pollute bad chemicals. This is one way we can protect the Earth.

In addition, we can protect the Earth by planting trees. When we plant trees we get fresh air to breathe and food to eat like apples. We should plant trees because trees are habitats for birds to make nests and many other animals. Trees also help us live because without them we would all die. Trees give us oxygen and we give them carbon dioxide. Trees are good for the environment. This is another way we can protect the Earth.

Lastly, we can protect the Earth by recycling. We can recycle because it helps save energy and water. Additionally, recycling reduces landfill waste. We can recycle paper, cardboard, and plastic. This means that if we recycle there would be less landfills and less garbage. When there are less landfills and garbage it is better for the environment. It is better to use reusable bags such as, paper bags and not plastic bags. This is the last way we can protect the Earth.

As you can see, these are some of the ways to protect the Earth. One way we can protect the Earth is by not littering. In addition, we can protect the Earth by planting trees. Lastly, we can protect the Earth by recycling.
