

Reduce, Reuse & Recycle

When you are done with something try to reuse it. Like plastic bags for example, they hurt animals in the ocean. You can save them and reuse them for the next time you would need them. “If you’re tossing in plastic grocery bags, or thin plastic boxes that raspberries come in, or old clothes, or plastic foam containers, or electrical cords and plastic hoses, stop.” When you recycle you are reducing the amount of waste, you’re preventing pollution, saving energy and much more. We could start something called a litter club. We could make groups of people and go around and go around our neighborhood and clean up.

It's Your Choice!
