

**Reduce, Reuse, & Recycle**

**By Steven Afre**

**Earth Day 2021- Senator Gianaris**

# How can you reimagine trash for a better future?

Introduction: Reusable materials

Support 1: wood

Support 2: plastic

Support 3: metal

Conclusion: No materials would go to waste and the landfill won't be over flow.

## Introduction

You can use reusable materials like plastic, metals, wood and buildings too for different things like plastic flower pots, plastic bricks, recycling buildings and recycling metal to make new buildings.

## Support 1

You can recycle wood for making tables, chairs, doors and more so you don't have to buy new tables and chairs also doors and you should not do that because you are just not reusing wood and so all of the trees will not be cut down.

## Support 2

You can recycle plastic to make like plastic plant pots and a lot more and plastic body parts to save lives and we can reuse it again so it won't go to waste and so it does not go to the sea.

## Support 3

You can recycle metal to make art like metal art and to fix old buildings too so that means you are reusing two times and sounds good because you helping earth by reusing wood, plastic and metal too.

# Conclusion

You need to recycle materials because No materials would go to waste and the landfill won't be over flow and wood, plastic, bricks and metal won't go to waste and so the landfilled won't be covered with trash too because it will be bad for the earth.
