

REDUCE, REUSE, & RECYCLE

BY TENZIN DOFAN

EARTH DAY 2021- SENATOR GIANARIS

Introduction

How to clean our planet:

We need to clean our planet from plastic and garbage. Did you know that there are about 5.25 trillion plastic in The ocean?

- *The first way to clean our planet is “We need to clean our ocean”*
- *The second way to clean our planet is to “think before you buy”*
- *The last and most important was is to “Recycle”*

As you see it's Important to take care of our planet

Support 1

Think before you buy it

Plastic is much more difficult to recycle like glass, paper garbage and Aluminum.

Most plastic ends up in a incinerator or landfill...while plastic increases recycling, there is only one way to alleviate this problem, it's a limited potential to glut plastic waste.

Glass will present some recycling problems—including end market's, contamination and also transportation costs—partly because it weighs 10 times as much as a similar volume of plastic or aluminum. It busts up easily, witch makes it harder on equipment and increasing maintenance costs.

Support 2

List of cleaning our ocean:

Educate yourself. ...

Cut down on plastic use. ...

Hold Companies Accountable. ...

Be aware of chemicals in your gardens and on your lawn. ...

Recognize the harm of individual litter. ...

Volunteer your time to clean up. ...

Donate to an ocean charity. ... Watch what you flush.

Support 3

Let's recycle

Did you know that in 2018, plastics generation was 35.7 million tons in the United States of America, Which was 12.2 percent of MSW generation. China used to buy 700,000 tons of plastic alone from us every year, to make new products. Then the Country stopped buying almost all our recyclables.

Conclusion

The first way to clean our planet is “We need to clean our ocean”

The second way clean our planet is “think before you buy it”

The most important way to clean our planet is “recycling”

As you can see we need to clean our planet earth.
