

# *The Future of a Cleaner Earth*

By: Violet Figueroa

Every day, there are tons of trash that gets thrown out or recycled. There are many different ways to reduce, reuse, and recycle all of this trash. Today, I am going to tell you about an idea I had to help Earth Day in the future. You know how you see trash along the sides of roads, in lakes, oceans, and even on property? Well, I have a solution that could help!

In the future, there will be a building where you can bring your trash so it can be reused and recycled. Inside this building, there will be sections of bottles, glass, paper, cardboard, and just regular garbage. You separate the trash into the sections, and it would be reused and recycled from there. There would be one building in every county in each state. People could go here any day of the year. If you see any sort of trash on your property, in your neighborhood, or even on the street while driving somewhere, pick it up with a bag and bring it there. When you do, you would get three dollars for each pound of trash you bring! So if you bring five pounds of trash, you will get fifteen dollars. You can go to this building as many times as you want. The more times, the better for you and also the environment!

This could help the Earth and the environment because it would be cleaner for not only homes and properties, but better for animals to live in the oceans and forests. The Earth would look nice and clean if nobody threw their trash on the side of the street or in the water, and now they'll have somewhere to bring it instead.

By having these buildings all over the United States, hopefully more people would help clean up the Earth by getting rid of garbage. This would help reduce the amount of waste and reuse garbage in helpful ways. Earth Day is all about reducing, reusing, and recycling. Hopefully this idea can help!
