Saving the Earth

In the past years our earth has gotten dirtier every minute, you may think "Oh well it's only on piece of trash" but it's not like that's the only piece that has been thrown on the ground today. It's one piece in a thousands just from that same today.

How As This Happened ?

When I think about this subject I think about one word.

Littering and wasting

this one word is what I think is the main problem. First off, all of us know that we have littered before, if it was recently or 5 years ago but we've done it. Along with that I think all of us have been told it's bad. But the really question is have you ever put that in to concertation. Some people live by those words that it's bad some don't. But when you really do you remember all those things you've seen. The trash on the roads, beach's, and pretty much any public space. How you saw that one piece of trash. Don't you worry here comes the good part. HOW YOU CAN HELP. First obvious thing DON'T LITTER, second if you see a piece of trash somewhere like your house pick it up, and third tell people. Tell people to stop and that it's not good because how do you think other people learned, by them being told.

So I hope you learned a thing or two and you keep this in your head for a while. The earth is calling you.
