### How we Can Save the Earth

How can we save the earth? Many people don't know how to save the earth, but don't you fear my friend I can tell you how we can save the earth.

#### Littering

One of the most seen and regular thing people do is litter. Littering is when people leave garbage on the floor instead of throwing it in the trash. I have three solutions to this. If people around you start to litter either tell them to throw it out or, throw it out yourself. Next don't litter, its bad for our earth. And three once in a while go out and clean up litter from parks, beaches, and ect-.

#### Don't Waste

Many people know arts and crafts can be fun, and well they are. But they aren't so fun when they are waisted and thrown out. Any garbage isn't good for earth. So if you make something keep it. Make it the best you can or something you can laugh at, not something you will want to throw out and waste.

#### Conclusion

So as you can see those to detailed explanations just helped show how bad people treat the earth. And soon there might not be a earth because of us. This is why we need to clean and take care of our earth. So in conclusion is earth worth putting all this work just for it to be healthy.
