

Let's Keep Our World Wonderful

By: Garry Tauzhnyanskiy

The world is a wonderful place. We have an amazing environment with lots of different types of organisms that we are ruining. We, as people, need to take action to prevent it. We have to make sure our world will stay a wonderful place. Our world is facing many problems like global warming, pollution, garbage in the ocean, loss of trees and other issues. We could solve these problems by using more electricity than gas, littering less and reducing the amount of items that we use such as paper. One of the biggest problems that the world is facing, in my opinion, is the loss of trees which are essential for our planet.

Trees are crucial in our world. They pull carbon dioxide out of the air, bind it up in sugar, and release oxygen. In simple terms they turn unhealthy air which is carbon dioxide into healthy air which is oxygen. We waste trees on daily things like paper, paper towels, toilet paper, wood chairs, wood stairs, wood floor, other types of wood furniture and lumber. An item that we use really often are paper towels. A really common use for them is to dry our hands after washing them. A solution for that is to use regular towels or dryers to dry your hands instead of paper towels. If you don't have access to any other item except for a paper towel to dry your hands don't waste 5 pieces, make the most of every piece. Instead of making our floors out of wood we could make them out of materials like concrete and ceramic. And instead of making furniture such as chairs out of wood we could make them out of metal and other materials.

In conclusion, we should keep taking care of our planet. We should stop littering to keep our world full of life and not garbage. We should stop using plastic to keep ocean animals from dying. We should start using more electricity and less gas to keep our world a clear place. Most importantly we should stop wasting trees to make sure our world has fresh air that every single living organism can enjoy.
