New Beginnings Learning Academy

The ocean is made of water.
There are different kinds of sea animals that live in the ocean.
The animals eat the different plants in the ocean.
We can swim in the ocean.
If our garbage goes into the ocean, the sea animals will get hurt.
The sea animals can't swim around the garbage and can get
stuck in the garbage.
The sea animals could eat the garbage and be sick.
We need to make sure that we throw our garbage in the garbage
can and not on the floor.
This will keep our oceans clean and our sea animals safe.
