Earth is mostly made up of oceans.
The ocean is made up of three layers; sunlight, twilight and
midnight zones.
The twilight zone and the midnight zones are harder to see in
than the sunlight zone.
There are many different kinds of sea animals that live in the
ocean.
Some people throw garbage in the ocean, rather than throwing it
in the garbage can.
We have to keep garbage out of the ocean. The sea animals
could eat the garbage and get sick.
We should work together to keep our oceans clean and our sea
animals safe.
