

Angel Torres

6th Grade Mrs. Daily

Ella Fitzgerald Academy, Yonkers NY

When I was a child, I used to see people throw stuff in the ocean. It made me feel bad for the animals because the animals were eating it and some even getting trapped in them. My family and I went to the beach multiple times. What if there was no garbage? We must tell people to stop throwing garbage in the ocean. If there was no garbage the ocean would be clean and no animals dying. Ocean pollution is a complex mixture made up of mercury, plastic waste, and manufactured chemicals. Many people have garbage in the ocean and sea animals eating them, dying, or getting stuck in them. Which means that there are many people cleaning the ocean and land. Idiotic people keep throwing garbage in the ocean and land. Example- in 2010 around 10 million tons of plastic and other kind of waste in the ocean. The most polluted ocean is the Pacific with 2 trillion plastic pieces and one third of the plastic was in this ocean circulates in the North Pacific Gyre.

We should stop ocean pollution in the Pacific because it kills animals on shore and offshore. For example, ocean pollution is bad for animals because the animals can eat them and have problems with birth and cancer or get stuck and not able to move. The fishes are in danger because the trash can be eaten but we do not know what the garbage because there could be toxic things like nitrogen, bleach, salt, pesticides, metals, toxins produced my bacteria, cigarettes, and human and animal drugs. In 2015, according to the study published in the Lancet, Water Pollution caused over 1.8 million deaths across the world because of ocean pollution. Contaminated water can also make one ill. Therefore, ocean pollution is bad.

Therefore, you should write legislation that makes the world stop ocean pollution. Ocean pollution comes from people. If people would stop throwing garbage in the ocean there would be no people and animals dying. There is over 269,000 tons of garbage in the ocean. Additionally, Ocean pollution can steal fishes' lives. About 120 engineers, scientists, computational modelers, and supporting roles. It is great because the people that are helping clean the ocean are not bad for the fish population. Imagine seeing clean water, fish, and clean land. The fish could be clean and in great shape and the people healthy. We need more people cleaning up the ocean other than throwing garbage in the ocean. We together can help clean the ocean and can help sea animals and people not be in adverse conditions like being in the hospital and even death.

Sincerely,

Angel Torres
