Pollution, what is pollution. Pollution is an introduction of harmful materials into the Enviromint. (Nationalgeographic.org) Pollution is problem because it “stunts economic growth, exacerbates poverty and inequality in both urban and burl areas and significantly contributes to climate change.” (World bank.org).

Another problem with air pollution/ pollution is a problem because “it could lead to Enviromental risk to health.” (worldbank.org) another problem with air pollution/pollution is “pollution is the largest Enviromental cause if disease and premature death.” (Worldbank.org) another problem is “Poor people who cannot afford to protect themselves from the negative impacts of pollution end up suffering the most”. (worldbank.org).

What causes pollution” household combustion devices, motor vehicles, industrial facilities and forest fire are common sources of air pollution.” Another thing that causes air pollution/pollution is “Air pollution is caused by solid and liquid particles and certain gases that are suspended in the air. These particles and gases can come from car and truck exhaust, factories, dust, pollen, mold spores, volcanoes and wildfires. The solid and liquid particles suspended in our air are called aerosols. (climatekids.nasa.int) Some realistic solution that can stop Reduce the number of trips you take in your car. Reduce or eliminate fireplace and wood stove use. Avoid burning leaves, trash, and other materials. Avoid using gas-powered lawn and garden equipment. And another one is driving less, in favor of public transportation, biking, or walking. These are the problems and solutions of what causes and what we can do to stop it.
