

Ways we can make everyday Earth Day!

1. Use items that can be recycled or used again.

Plastic bottles can be bowling pins!

If there is a plastic bag flying around, try to catch it and dispose of it properly! Be safe when doing this!

2. Don't litter!

Littering isn't good for the environment. Materials like plastic, are not biodegradable. That means that they don't break down easily! It could take up to 500 years for plastic to break down!

3. When you are not moving in a car, turn off the engine!

Keeping your engine on emits smoke into the air from the back of the vehicle! That smoke could cause air pollution, or even global warming!

4. Be Thankful!

When you are thankful, you are celebrating our one and only earth! Thank you!

If you ever find a small tree, try to give it some water! It needs to grow!
