

HOW WE CAN MAKE EVERY DAY EARTH DAY

By Sergio Valencia Navarro

REDUCE, REUSE, RECYCLE

- One of the easiest ways to make every day Earth Day is by reducing, reusing, and recycling. By reducing our consumption of single use products and packaging we can decrease the amount of waste that ends up in landfills or pollutes our oceans. We can also reuse items instead of throwing them away. Lastly, recycling materials like plastic, glass, and aluminum can reduce the need for new resources and save energy.

CONSERVE WATER

- Water is an important resource that is essential for life, but it is often taken for granted. To make every day Earth Day, we can conserve water by being mindful of our usage and finding ways to reduce waste. Changes like turning off the tap while brushing our teeth and taking shorter showers can save lots of water each day. By conserving water, we can not only protect our planet but also save money on our water bills.

REDUCE ENERGY USE

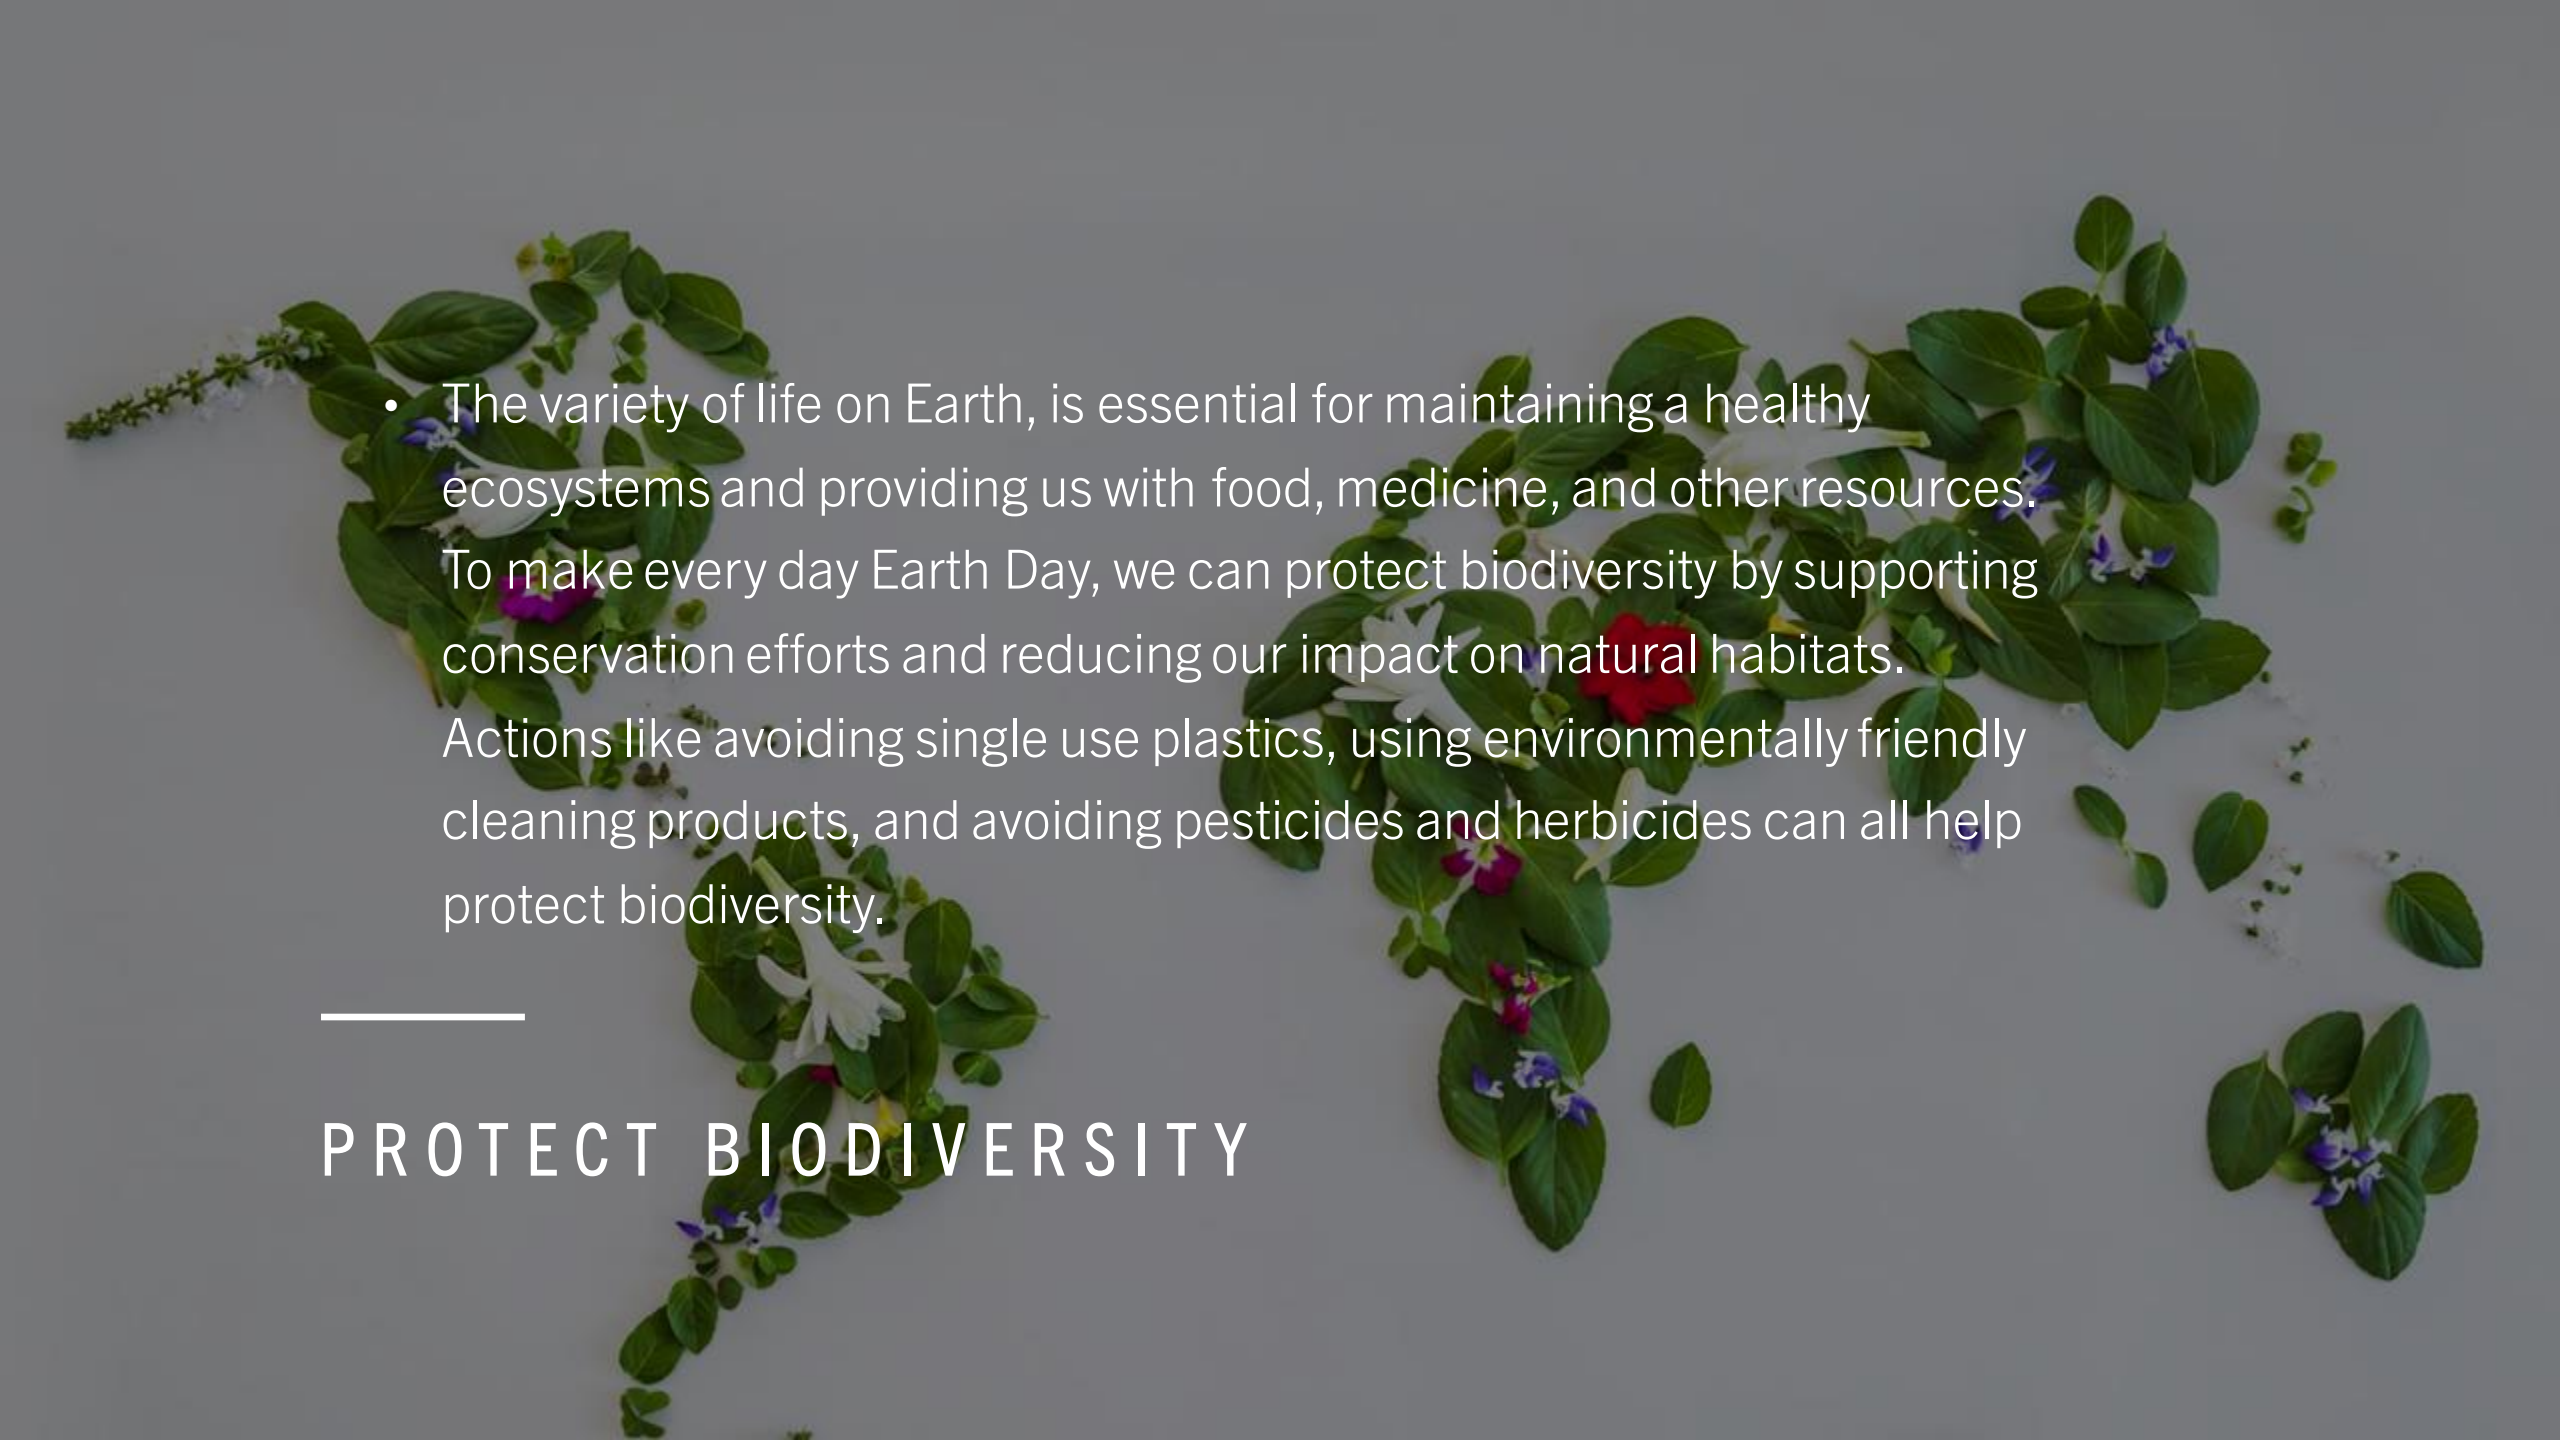

- Reducing our energy consumption is another way to make every day Earth Day. By using less electricity and gas, we can decrease our carbon footprint and help reduce climate change. Changes like turning off lights and electronics when not in use can all make a difference.

EAT SUSTAINABLY

- Eating sustainably means reducing our consumption of animal products and prioritizing local, organic, and plant-based foods that are grown in a way that supports the environment. By eating sustainably we can reduce our carbon footprint and help to protect the planet.

- 
- The variety of life on Earth, is essential for maintaining a healthy ecosystems and providing us with food, medicine, and other resources. To make every day Earth Day, we can protect biodiversity by supporting conservation efforts and reducing our impact on natural habitats. Actions like avoiding single use plastics, using environmentally friendly cleaning products, and avoiding pesticides and herbicides can all help protect biodiversity.

PROTECT BIODIVERSITY

EARTH DAY

We can make every day Earth Day if we all 8,031,800,429 humans start to take care of the earth by doing simple things like turning off the tap when not in use. we all should take care of the Earth because this is our home
