Earth Day Every Day

Let's make Earth day every day! Here are some ways you can be mindful of building structures, reducing and reusing, and use of solar power.

A way we can celebrate the earth is by being mindful of buildings because, if you are building a big building, then birds might collide into it and get hurt or if a building is underwater, then a whale could use echolocation and the building could mess it's echolocation and might die. But on the other hand, if you would not build any building or balance it.

Another way we can save the planet is by recycling and reusing. If you were walking around the city street and you saw a piece of a water bottle that was in the trash, you should pick it up and make something new like a small boat. You can put the following in the recycling bin like paper, a glass bottle plastic and a bottle.

Lastly, you can use solar power to save the earth by using the sun's heat waves and then convert it into energy. You can also use solar power to prevent pollution. Lastly, solar power can be used for electric cars like a Tesla.

In conclusion, people should be mindful of some buildings, reducing and reusing, and use solar power to save the earth and if they don't, well things are just gonna get worse from here.
