

### “Ways We Can Make Everyday Earth Day”

Did you know that every year we dump 2.12 billion tons of waste? Littering causes pollution. There is land pollution, ocean pollution, and air pollution. We should save the earth by cleaning it instead of littering that causes pollution. The first Earth Day was in 1970. We celebrate earth day because it protects the planet from things like pollution and deforestation. We can make everyday earth day by picking up litter and planting trees. We can also save the earth by using the three R's. The three R's stand for reduce, reuse, and recycle.

In this paragraph we will talk about reducing things. Reducing means to decrease the amount of waste we use. We can reduce the amount of waste in our environment. Here are some examples. We can reduce the amount of energy like turning off the light when you are not using it. You can also reduce your shower time. In addition, you can reduce the amount of plastic created in the world. Instead of using plastic bags when you buy groceries you can use a reusable bag. You can also start composting in your yard. You can compost food and vegetables scraps. You shouldn't compost cheese and dairy products.

This body paragraph will talk about reusing things. Reusing means to use something again. We can reuse many things in our environment. Here are some examples of things we can reuse. We can reuse things like clothes, toys, furniture and many other things. Instead of throwing these things out you can donate these things, give it to your friends or have a yard sale. Somebody else might need things that you don't need anymore. Cans, boxes, and containers can be fun arts and crafts project. You can use your imagination to create new things out of many materials instead of throwing them out.

This paragraph will talk about recycling things. Recycling means to convert waste into reusable materials. We can recycle many things in our school, community, and at home. Here are some examples of things we can recycle. Things such as glass, cans, paper, cardboard, plastic bottles, and jars are recyclable. Recycling helps prevent pollution it can also save energy. Recycling can also reduce the amount of waste that is sent into the landfills.

In conclusion, reducing, reusing, and recycling are the three main ways we can make everyday Earth Day. These are many other ways we can make everyday Earth Day but these are the three main ways we can make everyday Earth Day. If we use these ways everyday we can make everyday Earth Day and make Earth a healthier and better place to live in.
