

Why Clean Energy Is Important To The Planet

The reason I think clean energy is important to the planet is because the ecosystem can't survive if we keep polluting the air, water and the whole environment. So I think we all should recycle more and always find alternate ways to use less fossil fuels that keep polluting our ecosystem. First everyone should waste less water when you are brushing your teeth. Turn the water off while you are brushing. Next I want to talk about solar power. You can use the sun to generate electricity for your home through solar panels that are installed on your roof. Next I want to talk about hydroelectric energy. Hydroelectric energy generates power by moving water very fast. Next I will talk about wind energy. It generates electricity by blowing wind turbines. These are some reasons why clean energy is important.
