

Reduce, Reuse,

 Recycle 

Earth Day: Apr. 22, 2005

Reduce, Reuse, Recycle is a phrase you might hear a lot.

The three R's are a very big part of Earth Day. One specific thing I'd like to focus on is Reducing our waste. In

the US, we put out a lot of carbon dioxide waste. This is referred to as our carbon footprint.

The Carbon footprint that you imprint on the earth adds up to about 16 tons of Carbon dioxide waste per year! If we continue this, global warming will grow on, destroying environments & habitats. However, we can battle this! One simple way to reduce energy and CO₂

waste is by unplugging and mechanisms, like your toaster, when they're not in use. You can also try biking

to school instead of driving! Hopefully, if we all contribute, we can save our Earth!
