Our Planet

Our Power,

It is really important to protect and save our planet. We can use our power to make our planet a better place. Some ways we can do that are cleaning up, not littering, and using solar power. Solar power is important because if we do it we won't burn so many fossil fuels and not pollute the air so much. Not littering is also important so garbage isn't all over the place. In Conclusion it is very important to take care of are plant very well
