

Compost

Challenge

Things that can't be recycled go in one bin, recycling items like paper can go in another and then food scraps – like banana peels and apple cores, go into a third bin.

At school, there will be a new trash can for the students to sort all trash so there are three cans: Garbage, Recycling, and Composting.

At the end of the week, the trash can contents can be checked out to see what they got right and what they didn't.

After the class discussion, the food scraps bin can be used to start a compost bin that the kids can make and monitor for a few weeks until the food scraps break down and go back into the dirt.

That dirt can then be used to plant a class tree or shrub at their school.
