

Recycling

Hi! My name is Minsa Usman. I am a student in P.S.216 and I feel strongly about recycling. Did you know that the environment is getting dirty everyday? People notice it but they ignore it, don't let it influence you because the environment becomes unhealthy. Just imagine how it would feel if you were surrounded by trash. I believe recycling benefits the environment by keeping it clean, conserving energy, and helping animals stay safe.

One reason to recycle is that it provides many benefits to our environment. By recycling our materials, we create a healthier planet for ourselves and future generations. Recycling the need to extract resources such as timber, water, and minerals for new products.

Another reason why recycling is important is that it conserves energy. For example, according to an article Benefits of Recycling "processing requires less energy compared to creating new products from raw materials, leading to reduced energy consumption and lower greenhouse gas emissions. Also, by recycling we send less waste to landfills, which helps prevent release of harmful greenhouse and contamination of soil and water.

Another reason is by recycling animals will stay safe. According to a video, there was a Turtle that had a plastic bag stuck in its throat. That is because people are also trashing the oceans.

What you can do to help is clean up any garbage you see and You can help animals. When you these people will be happy, animals will be safe, and **most of all the environment** will be healthier Thankyou for listening to my speech and remember to recycle!
