

Garbage User Program!

Envision stepping out to the backyard in the nice warm sun excited to enjoy the well-cooked and bright orange seasoned kimchi fries. While hearing the songs of the birds and getting comfortable, placing the hot plate onto the table, there is an overwhelming and disgusting smell that destroys the nice feeling of good food. Even worse, the shiny silver fork is gone! There are no more forks in the brown rusty cabinets. Can things be worse? I believe there should be something called the Garbage User Program and people will turn garbage into daily life items. Those who attend and get into the program will help reduce pollution. Also, being part of the GUP (Garbage User Program) might help people save money. Furthermore, the money saver program helps children with education.

Did you know that pollution is one of the most harmful filthiness in the world? According to Conserve Energy Future.com, "... 5000 people die every day as a result of drinking unclean water." However, there are many ways to help prevent pollution from dominating our clean earth. One of the ways to help prevent this nightmare is signing up for the GUP. People who sign up for the Garbage User Program will use garbage and turn it into daily life items, starting from 7 o'clock in the morning to 1 o'clock in the afternoon on the weekends. The Program will take place where the nearest dumpster is to the members.

Garbage Artists will have to drive, walk, bike or any type of transportation to the dumpster. The GUP will provide advanced masks to block bad odors and tools to help build structures out of the waste. Three staff members will be at every dumpster to help the participants be organized and provide the materials to enable the artists to build anything they need and to take their built items to their homes. The staff members will wash all the items that participants build to prevent bad odors. As time goes on, dumpsters will not be overfilled with nasty items, and the earth will become a cleaner and better place. All of this will help reduce pollution.

Have you ever heard of something called "Saving Money?" Do you know the GUP way of saying it? It's called "Saving Money the CLEAN way." If you are wondering, "How does joining the GUP help save money?", imagine there is this one broom that is nice and simple and can help with many things in cleaning. After joining the GUP all you have to do is make it! Yes, it won't be as nice, but people don't have to spend money to buy it, and it is all free! This means the creators can make anything from a broom to a cat house, or maybe even an automatic garbage can! Also, it will get cleaned by the staff members, so people do not have to pay for cleaning their creations. And yes,

artists can make an unlimited number of items from garbage. As more people join GUP, more creators will build their daily necessity items instead of buying them.

Many people do not like school and find it boring or stressful. However, school provides us with something we need. Education. But joining GUP can also help with education! No, participants do not learn math and reading there, but a different type of education. Creativity.

The process of making daily items from garbage will naturally force artists to get creative and make them think what they should make. Also, creating things can also help with school education too! According to "iste.org" Creativity can motivate children to learn and can solve problems in their own way. This means that children can find their own hacks or ways to solve math problems! Creativity can really help people in both types of education!

But there may be things that people dislike about the GUP. For example, creating items with garbage can be dirty and smelly. Some artists may want to leave the program because of the smell alone. In addition, some people may not have time to come to the program. Since the program starts at 7:00 a.m. and ends at 1:00 p.m., Some may not be able to attend during these times. But, even though joining the GUP can be dirty and the timing might not be perfect, there would be tools and equipment so that artists do not get dirty. Moreover, the program is on the weekends so adults won't have to work, and kids don't have to go to school so people might have a better chance of coming.

Imagine a clean world with no pollution where the air is clean, the oceans are happy, and the water is nice and fresh. I think having the GUP is one of the steps of having a clean world! Also, if there is a GUP then, people will be able to help stop pollution, save money, and creators can get smarter too! Now, if there is a garbage user program then, forks for kimchi fries won't get missing. Furthermore, the bad smell will be replaced with clean and fresh air. In the future, there should definitely be a Garbage User Program!
