

Liam Summers

Grade 5

Clifford Wise Middle School

Medina, NY 14103

What I would do to do waste reduction is use old paper. You could use the back of it when I'm done using it. I would recycle because leaving paper around is wasteful. You could recycle it and it would be used for other things. For example, glass they melt glass bottles that u recycle and they turn it into other glass structures. Another example is aluminum. They melt the aluminum in extreme heat and it melts down and they use the after results to make more stuff. This is a great way to reuse materials and reduce waste!
