

Earth

*Billions of years
Billions of days
The solar nebula came
Gave all of the Earth
Gave all of the pleasure
The world were humans rein
Through all of the stars
Through all of the life
We began*

*Hadean came
From the creatures below
The molten wastes of heat
The comets from above
Oceans would rise
As the Earth would fall
But then came the moon
The shiny great moon
And it let us through*

*Archean's time
It was the first
Of a great grand origin
The beginning start of us
And the eras that went*

*With ancient dawn
With biology's growth
Oxygen atmospheres
Let us all come up*

*Freeing all oxygen
Of the Proterozoic
Oceans were grand
And that's not a lie
And then it all froze
Ice all around
Large masses of land
All broken apart
And that leads us to the new start*

*Life onto land
And animal shifts
Bird and mammal
All the change
Plants would grow
And we would grow right too
Grasses came
Human right along
And into the present where we all belong*

*Through rough times and good
One thing has stayed
The Earth was always with us
And we were with it too*

*Earth and humans care
And even through the worst times
We came to help
Through our power
Through our planet*
